JULY 1, 1947

No. 2

NEW SEED POLICY

Small Packets Now Available

Many of you have asked for smaller packets of seed and in response we now sell three sizes of packets. *Full packets* from which 10 to 15 flasks can be planted, *half packets* and *quarter packets*.

All packets contain printed instructions for handling small quantities of seed.

As always—all seed is fresh and tested for viability. You can't buy old seed from us, we don't have it.

AN ENTIRELY NEW SEED LIST

An Exciting List of Fine New Crosses.

Plenty of fine modern Phalaenopsis. Brasso-laelio-cattleya. Laelio-cattleya, and Cattleya crosses.

Our new seed list contains the best crosses money can buy. The finest possible parentage, many of them obtainable only thru us, combined to give large brilliant flowers, winter and spring blooming season and strong growth. We always breed for floriferous hybrids also keeping in mind that three flowers per stem instead of two will give you nearly 50% additional income. Then also there is the question of texture, heavy texture means long life for your flowers, good shipping records and satisfied customers.

We use our famous hybrid BLC Dorothy Fennell very often in our crosses for all of the above reasons—it is winter blooming, it is floriferous with two to four flowers per stem from good plants, it has wonderful heavy texture, with long lasting bold flowers, and it is a strong growing plant.

We also use, and these are exclusive with us, our fine types of Cattleya Trianae, Schroderae, Mossiae and Gigas. These plants are excellent for setting the blooming season of the advanced hybrids and as the varieties we use are better than most hybrids seen we know that you will be pleased with the results.

Lc Altess—beautiful flower fully 7" in diameter, very well held and of wonderful shape and texture. Medium lavender s & p, darker lavender lip. One of our better stud plants.

HOW TO SELECT PLANTS FOR A COMMERCIAL COLLECTION

Some Interesting Comparisons

If you intend to grow orchids commercially *grow the best*. Fine Orchids cost no more to grow and not much more to buy as seed or seedlings and quality certainly tells when you start selling. Here is a good example of what I mean.

NEW YORK PRICES (Wholesale)

Thanksgiving 1946

Species cattleyas	
Percivalliana50 - 1.25
Trianae	1.50 - 2.50
Colored Hybrids	3.00 - 6.00
White, colored lips	3.00 - 7.50
Pure White	6.00 - 10.00
Vandas	1.50

New Years 1947

Species cattleyas	
Percivalliana75 - 4.00
Trianae	2.50 - 4.00
Colored Hybrids	3.00 - 6.00
White, colored lip	4.00 - 10.00
Phalaenopsis	1.50
Oncidium20 - .25

Easter 1947

Species cattleyas	
Mossiae	1.00 - 2.00
Colored Hybrids	3.00 - 7.50
White, colored lip	4.00 - 7.50
Pure White	4.00 - 10.00

As you see good colored hybrids averaged over twice the species average while white with colored lips brought still more. Pure whites usually top the market but there is

danger of getting too many in your collection, the demand for them is limited, mostly to weddings, and good colored hybrids with a quantity of whites with colored lips should form the body of your collection.

I admit that representatives of all the good species should be in every collection but many more hybrids should be there if you want to get the best returns. But be sure the hybrids are good, orchid flowers are sold according to quality not pedigree hence our top trianaes, mossiae and gigas are sold as top hybrids not species. Many hybrids are poorer than average species and are sold as such.

SEEDLINGS

- 200—C. Clementine Goldfarb x C. Eucharis. A very fine winter flowering white, both parents fine types. Strong young plants in 2½" pots.
Plants 3½" to 4½" tall\$5.00 each
Plants 4½" to 6½" tall\$7.50 each
- 201—Phalaenopsis Doris—some beautiful young plants of this grand white hybrid. This is the original strain. Plants in 3" pots, leaves overall 3½" to 5" for August delivery\$6.00 each
- 206—C. Amantic x C. Angelina. The finest alba cross we've offered yet. C. Amantic has white s & p and a deep, fine lip, while Angelina is pure white. Only a few of these. Plants 3½" to 4½" tall in 2½" pots\$5.00 each

ORCHID GROWING HINTS

Clean Hands—Believe it or not, you can now pot orchids all day and still have clean hands that night. Use Dreft or one of the other synthetic soap powders, a nail brush and hot water. A little scrubbing completes the job.

Potting—Watch your plants for those that need repotting. If a plant is shrivelled tho you water regularly once per week or more, investigate their roots. It is very possible that they may need repotting.

Whenever your plant has lost it's roots in the compost you need to repot. No amount of water or fertilizer will help if there are not roots to absorb it.

When repotting remove all old compost and dead roots, work the new Osmundine in among the roots carefully with your fingers, then pot firmly. If the plant has too few roots to be kept firmly in place by them, stake. A plant that moves every time it's watered or handled will never get established as it's tender root tips will be injured by each movement.

Watch Humidity—these hot summer days, a good spraying over at 10 a.m. and 2 p.m. is good on bright, hot days (or one at noon). Use just enough water to wet the leaves and benches. As your plants are all in growth give them one or two waterings per week in addition to the spraying. Withhold water for a few days if any black growths develop.

Feeding—Since our last issue we have received many letters on this controversial subject. Any good hydroponics formula is satisfactory particularly if used at about one-half the strength used for vegetables but be sure not to overfeed. Orchid feeding is still experimental, no one knows much about it yet. Here is a formula we've found satisfactory.

Calcium nitrate $\text{Ca}(\text{NO}_3)_2$2. grams
Amonium sulfate $(\text{NH}_4)\text{SO}_4$	1. grams
Monopotassium acid phosphate (KH_2PO_4)5 grams
Magnesium sulfate MgSW_4 .7H ₂ O5 grams
Iron Phosphate FePO_41 grams
Water1000 cc

This is Knudson's solution with the sugar and agar left out and the fertilizer quantities doubled. We adjust it to a pH of about 4.5 before applying it to the plants. Generally we use it once per week.

Phalaenopsis Confirmation in the Jungle. A fine light pink Phalaenopsis. Flowers 3 1/2" to 4" across. Very nice shape and heavy texture.

LOVELY PHALAENOPSIS

Easily Grown, Very Floriferous.

No Collection Should Be Without Them.

Of all the spray orchids Phalaenopsis is perhaps the queen. They are easily grown in a warm or intermediate house tho they do not like temperatures at night below 60-65.

The original Phalaenopsis species came from the Philippines, and the East Indies, but now most of the plants grown are hybrids. The best varieties are white and various shades of pink. The hybrids have larger flowers, better substance and are easier to grow than most of the species.

The larger flowered types generally have only five or six to ten or twelve flowers per spike. Of these we have types of Phal. Doris, Katherine Seigwart, Apparition, Psyche, Confirmation and Reve Rose with flowers up to five inches in diameter on large plants. The smaller flowered types such as Schilleriana, Grand Conde, Rothschildiana, Jardin des Plantes have flowers two to three inches wide, usually in shades of pink, but they sometimes produce as many as eighty or more flowers on a spike and two or more spikes per plant.

Phalaenopsis like plenty of water, frequent repotting (or better, the renewal of the potting material without disturbing their roots), more shade than cattleyas, and plenty of heat. Temperature of 70 degrees at night and 85 to 100 during the day in summer and 60-65 to 85-90 in winter are about right.

Nothing will give you more pleasure nor more blooms than Phalaenopsis, they are easy to grow and there is a growing demand for the flowers. We are listing some large fine types as well as some small plants of fine parentage, and don't forget that you can grow blooming size plants from seed in three years.

WHAT SOME OF OUR CUSTOMERS THINK OF US.

We receive a great many interesting letters and just in case some of them might be of interest to our readers we will quote from a few of them from time to time.

For instance one of our customers who has had trouble in finding good plants has the following to say . . . "when I do receive a fine specimen, I write to compliment the grower on his ability as a grower and congratulate him on his integrity as a dealer and a man. Please accept not only my compliments and congratulations but my thanks for the excellent plant you sent me . . . I took it out of the pot which you sent and I never saw such a root growth on any other plant which has been sent me. The whole pot was filled with live roots, including the portion under the back bulks." Another of our friends writes, "The Orchid plants you sent me arrived in fine shape. Am very much pleased with them, they are so clean and healthy looking. Thank you. I enjoy reading The Fennell Orchid News. Would be glad to get one any time you have them."

And then from far Hawaii the following notes arrive, "Received the community pot plants in fine condition, thank you for your kind and prompt attention to my order" and from another customer there, "The plants arrived in perfect condition."

Many of our friends write us about orchid seed and successes and failures they have with it. By the way we are always glad to help with suggestions if you are having difficulties. One of our customers writes, "Am greatly looking forward to your next seed list, for your seed grow. I have had very different experiences with other seed—which was treated in exactly the same way as yours, no germination at all or only one to five per flask."

Fennell's Orchid Seed Price List No. 5

No. 50 Blc Dorothy Fennell 45140

C. Admiration 46528

This Dorothy Fennell has light lav. sepals and petals, lip large beautifully marked gold and purple, fine large flower, great substance, in 8" pot plant produced 7 flowers last season. C. Admiration light lavender s. & p. deep lip, fine round flower. This should make one of the very best winter flowering hybrids.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 51—BLC Dorothy Fennell 45136

C. Leda alba 45171

This Dorothy Fennell has enormous pure white sepals and petals and a deep purple and gold lip substance very heavy, shape fine. Strong growing. The Leda has white sepals and petals with a deep blood red and gold lip, good shape and substance. This should be a fine winter blooming type, probably will have some plants with colored sepals and petals.

Pkt. \$20.00 1/2 Pkt. \$11.00 1/4 Pkt. \$6.00

No. 52—C. Enid St. Albans

C. Trianae Naranja

The best dark Enid we have seen crossed with the Trianae parent of Dorothy Fennell. This Enid is dark, large, well shaped and blooms at almost any time during the year. While Trianae Naranja is a giant plant, with large fine flowers of great substance, s. & p. light lavender, lip very large, brilliant purple and gold.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 53—C. Trianae Mary Fennell

C. Admiration

We believe Mary Fennell to be the best trianae in cultivation, it is dark, large round, heavy substance. Both parents bloom for Christmas.

Pkt. \$20.00 1/2 Pkt. \$11.00 1/4 Pkt. \$6.00

No. 54—C. Odalisque alba

L. Anceps Sanderiana

C. Odalisque is a fine pure white, winter bloomer. L. Anceps Sanderiana has white s. & p. with markings of purple and gold on the lip, Christmas bloomer. Should make a medium sized white s. & p. flowers borne three to five on the spike.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 55—BLC Dorothy Fennell 45199

L. Anceps Sanderiana

A very large white s. & p. D. Fennell with fine substance and beautiful shape on the Anceps Sanderiana described above

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 56—C. Trianae var Eminence

SLC Mrs. Frank Mercer (Fine very dark)

Trianae Eminence is one of our largest and best. Sepals and petals medium lavender, lip large and dark, a heavy round flower. Mrs. Mercer is one of our darkest and loveliest hybrids, round and beautifully shaped, medium, sized. Both are winter blooming.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 57—C. Trianae Naranja

C. Belgica

Our famous Naranja mated with Belgica (C. Enid x C. Remy Chollet) which should make an unusually good winter bloomer. Flowers should be medium to dark lavender, fine shape, substance and strength.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 58—L. Anceps Sanderiana

C. Mossiae Viscount Kitchener

Kitchener is probably the best pure white we have and combined with Anceps Sanderiana it should make a very fine spring and late winter bloomer, with from three to five flowers per spike.

Pkt. \$20.00 1/2 Pkt. \$11.00 1/4 Pkt. \$6.00

No. 59—Trianae Jungle Queen

C. Enid St. Albans

Probably our best shaped light Trianae crossed with the very fine Enid St. Albans. Should make an excellent thing—the resulting cross C. Clotho is winter blooming.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 60—C. Clotho 46720

LC James Rabe 46288

This is a very fine round, heavy Clotho crossed with our finest James Rabe which is large, very dark and floriferous. Both winter bloomers.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 61—C. Trianae Ruby

C. Rajah

Trianae Ruby is medium sized and very dark usually three to the stem. Rajah had five on the stem, was very dark. Both bloomed at Christmas, should make a dark, medium sized, December bloomer.

Pkt. \$12.50 1/2 Pkt. \$7.25 1/4 Pkt. \$4.00

No. 62—C. General Pulteney 46722

C. Trianae 46721

Pulteney (Octave Doin x Trianae) is one of the most famous of the winter flowering cattleyas and this Trianae is large, well shaped and medium lavender, both are strong growers.

Pkt. \$12.50 1/2 Pkt. \$7.25 1/4 Pkt. \$4.00

No. 63—C. Portia 46308

C. Leda 45171

A very dark fine portia crossed with the Leda described above. Will probably have six to eight flowers per stem each about 4" wide, with fine color and lips. Some may have white sepals and petals.

Pkt. \$12.50 1/2 Pkt. \$7.25 1/4 Pkt. \$4.00

No. 64—BLC Dorothy Fennell 45140

C. Dusseldorfii Undine

An almost pure white Dorothy Fennell with just a trace of pink in the lip, fine shape and substance, very large crossed with the pure white Dusseldorfii Undine, which is medium sized and of heavy texture.

Pkt. \$20.00 1/2 Pkt. \$11.00 1/4 Pkt. \$6.00

No. 65—Phalaenopsis Schilleriana

Phalaenopsis Grande Conde

Both parents produce many medium sized lavender flowers. We have had more than 100 flowers on each plant. Should make a showy hybrid.

Pkt. \$12.50 1/2 Pkt. \$7.25 1/4 Pkt. \$4.00

No. 66—Phalaenopsis Doris

Phalaenopsis Confirmation

Doris is one of the most noted and best whites, flowers large with great substance. Confirmation is light pink with fine shape and size. Should produce light pink and probably some white flowered plants.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 67—Phalaenopsis Schilleriana

Phalaenopsis Katherine Seigwart

Seigwart is a very large fine white and crossed with Schilleriana it should make a fine large light pink with many flowers.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 68—Phalaenopsis Confirmation

Phalaenopsis Rothschildiana

Two fine medium pink varieties. Should make an appealing thing.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 69—Phalaenopsis Reve Rose

Phalaenopsis Schilleriana

Reve Rose is the best dark pink, large flowered Phalaenopsis we have ever seen. It has fine shape, size, substance and is a deep pink color all over. P. Schilleriana is smaller but very dark and very floriferous. Should make a fine, medium to large, dark flower.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 70—Phalaenopsis Elizabethiae

Phalaenopsis Katherine Seigwart

Both parents very fine large pure white with heavy substance.

Pkt. \$15.00 1/2 Pkt. \$8.50 1/4 Pkt. \$5.00

No. 71—C. trianae fine var.

C. Clotho

Should make a large, winter blooming hybrid. Medium lavender, strong growing parents.

Pkt. \$12.50 1/2 Pkt. \$7.25 1/4 Pkt. \$4.00

No. 72—C. trianae fine var.

C. trianae fine var.

Two fine trianaes that bloom at Christmas. Trianae is the most dependable winter bloomer of all.

Pkt. \$7.50 1/2 Pkt. \$4.50

No. 73—Mixed Cattleya Hybrids

An excellent mixture of cattleya hybrids, all winter and spring bloomers—Good to experiment with, some Dorothy Fennell crosses in each packet.

Pkt. \$7.50 1/2 Pkt. \$4.50

No. 74—C. Bowringiana Purple Princess

LC Eva Shill 46602

C. Bowringiana Purple Princess has flowers 3" in diameter borne in a cluster of 10 to 20 flowers on bulbs 2" to 2 1/2" tall. Eva Shill has large blooms with dark mauve s. & p., lip darker with large yellow markings and is a well known American hybrid. Ready now.

Pkt. \$12.50 1/2 Pkt. \$7.25 1/4 Pkt. \$4.00

FENORCO SPRAY GAINS POPULARITY

Letters of praise from many of our customers continue to pour in to us in a swelling stream all singing high praises for FENORCO ORCHID SPRAY containing D.D.T. Read below what our customers think.

"I've used your FENORCO D.D.T. spray with wonderful results. I have been growing orchids over 15 years and never had my collection clean of scale until this month. Now after two sprayings of your FENORCO spray you can't find a live scale in the place. It's the greatest plant and labor saver I have ever found. You are doing the orchid industry a great service by making this wonderful material available at a reasonable cost."

"Please send me some more FENORCO—it's the answer—complete—to my orchid pest troubles," writes a customer from California.

"I have been experimenting with your FENORCO spray on some of the other plants on our estate. I have had excellent results in controlling scale on Gardenias, Camellias, Roses and palms with never a burn even in 90 to 100 degree weather. Of course it has also cleaned up our orchid collection."

"I tried for eight years to clean the thrip and scale from my orchids and they were getting the best of me until I got a pint of FENORCO spray last December . . . I sprayed twice, once in early January and once February 6th. Now you can't find a live insect anywhere in the greenhouse. Not a sign of a burn even on small seedlings."

More and more people are finding new and interesting uses for this fine product. If you have had an interesting experience with it will you write us about it?

If you haven't tried it, do so now. We'll gladly ship immediately upon receipt of your order.

FENORCO ORCHID SPRAY containing D.D.T.

Pints	\$3.00
Quarts	5.00
Gallons	15.00

A gallon makes 49 gallons of spray for application. The concentrate keeps in definitely.

Vanda Flammerolle. A caerulea hybrid with blue-purple flowers. A strong growing type usually carries 2 or 3 spikes of 9-15 flowers and can be bloomed two or three times a year. Flowers 3 1/2" to 4" in diameter.

My Father and The Wildcat

A True Story of the Orchid Jungle.

by T. A. Fennell

The Orchid Jungle is located about 8 or 10 miles from the untouched parts of the Everglades—The Everglades, as you know, is one of the wildest and least known areas within the United States. It is full of thousands of wild birds, deer, some bear, wildcats, panthers, otter and other animals. From time to time some of these animals stray from the Everglades and are seen at the Jungle.

Wildcats, apparently, roam more widely than do some of the other animals and seem to have a sort of circuit which they follow staying in one area long enough to clean up the rabbits and birds they relish and then moving on to better hunting.

One morning in the spring of 1930, I believe, my father was potting orchids on a table in a corner of one of his lath houses in the Orchid Jungle when he noticed, not over 25 feet away, a young female wildcat sitting and watching him. She was gently purring and staring unblinkingly at him with no movement of any part of her body except the occasional twitching of an ear.

She was large, as are most Florida wildcats, measuring 27 or 28 inches at the shoulder.

Dad continued potting apparently paying no attention to her, but soon starting talking to her in a low voice. After a few minutes of this he put down his work and started walking slowly toward the animal. Before he had taken two steps she broke the spell by silently, almost fluidly, disappearing into the undergrowth. Dad told the rest of us about it at dinner that night and thought that that was the last he would see of his "friendly" wildcat but the next morning she appeared again. The same business was gone thru except that this time she allowed him to approach one or two steps nearer before disappearing.

She remained at the Jungle for about two weeks—visiting Dad daily and daily becoming a bit more approachable—at the end of the period she would let him approach within 8 to 10 feet before moving.

Then she didn't show up one morning—this time she was gone about two months and then one morning here she was back again—just as "tame" as ever. Again she stayed about two weeks, each day becoming a bit more friendly until she would sit on a bench only five or six feet away for an hour or so while Dad went about his work. He could move around, talk to her and do anything so long as his movements were not abrupt and she would sit purring on the bench. He could never get closer than six or seven feet, however, and she would never

COMMUNITY POTS

- 202—Phal. Schilleriana x Phal. Fontainbleu (Phal. Hawaii) Schilleriana has large sprays of small dark pink flowers all of which bloom at the same time while Fontainbleu has large light pink flowers of good shape and texture. The result should be a good bloomer with deep pink flowers on a large spray.
2 1/2" size 15-20 plants\$25.00
3" size 25-30 plants\$30.00
- 203—Phal. Amabilis x Phal. Stuartiana. Amabilis has 6-15 white flowers up to 4" wide while Stuartiana has blooms 2" across with s & p white spotted with red-brown, lip yellow and also spotted. They produce a hybrid 3-4" across and An unusual addition to your collection.
2 1/2" size 15-20 plants\$25.00
3" size 25-30 plants\$30.00
- 204—Bc. Imperialis x C. mossiae. Imperialis is a large fine medium orchid colored flower with a dark lip. C. mossiae one of the finest, large, medium colored flowers, frilled lip, early spring bloomer.
Pot\$25.00
2 1/2" size 15-20 plants\$25.00
3" size 25-30 plants\$30.00
- 205—Lc Eva Shill x Lc Sargon, var. Conquerou. Eva Shill was a medium size, exceptionally dark 6" in diameter, very fine flower. Lc. Sargon was an immense flower 8-9" across, medium dark with a dark lip. This should make a floriferous, late winter or early spring bloomer.
2 1/2" size 15-20 plants\$25.00
3" size 25-30 plants\$30.00

take food from him directly but if he would leave fresh meat on the bench in the evening it would always be gone the next morning.

Finally after four or five of her visits each of about two weeks duration and each spaced eight to ten weeks apart she decided she would follow him around the lath houses as he worked. She would walk along within 10 to 15 feet just like a tame cat or dog but when anyone else was heard approaching she would immediately disappear.

As we of the family would hear the day's adventure from Dad and none of us had ever seen this marvellous cat we became suspicious that possibly she didn't really exist—but she did. I saw her sitting on the bench one day and had several other fleeting glimpses of her. Other members of the family also caught glimpses of her on several occasions. She even helped herself to two of mother's chickens.

This strange relationship went on for a period of several years and was enjoyed by both participants. Dad had a real feeling of understanding for things natural and all animals and birds seemed to sense it. Finally, however, she failed to appear and we presumed that she had been killed.

MATURE HYBRIDS AND FINE SELECTED SPECIES

In response to the many requests of our customers we are listing now and will continue to list from time to time, some of our better mature plants.

- Lc Isle de France—Well known plant with large and lovely dark flower, winter blooming, 2 leads 6 bulbs 8" pot\$35.00
- C. General Pulteney—Bright flower, dark lip with yellow markings, winter blooming, generally February 5 bulbs 1 strong lead 1 small lead 7" pot\$35.00
- Lc Aphrodite alba—Fine white s & p blooms late May early June.
5" pots good plants\$40.00
6" pot strong plants 50.00
- Bl Helen—A fine parent plant s & p nearly white lip large and frilled, strong grower, blooms several times a year. One plant only\$75.00
- Blc Dorothy Fennell—45138 Nice, large well held medium lavender flower, fine lip with purple and yellow marking 8 bulbs 2 leads 7" pot\$85.00
- Blc Dorothy Fennell—46510 Medium dark lavender s & p large lip good variety 7 bulbs 1 lead 5" pot\$60.00
- Blc Dorothy Fennell—46512 Medium dark good variety purple lip with yellow blotches, strongly held, 11 bulbs 2 leads 8" pot\$80.00
- Blc Dorothy Fennell—46504 light s & p light lip with rose and gold veins. Good variety 8 bulbs 1 lead 5" pot.....\$60.00
- Phal. Reve Rose—A beautiful pink hybrid, one of the most famous. Good plant in 6" pot\$35.00
- Phal. Rimestadiana—White hybrid, flower 3-4" in diameter, nice shape, wonderful texture 6-15 flowers per spike. Strong, well grown plants with 3-6 leaves 6-10" long\$20.00
- Phal. Confirmation—Light pink hybrid, 10-20 flowers 3 1/2"-4 1/2" in diameter per spike. Often carries 2 or 3 spikes. Strong, well grown plants with 3-6 leaves 6-10" long\$20.00 (The supply of these Phalaenopsis is limited. Order promptly).
- Laelia anceps—A fine dark type, flowers about 4 1/2" to 5" in diameter. Dark, rose lavender, generally three to a stem. Blooming season fall and winter. 5" pot\$6.50
- Laelia anceps Sanderiana—The finest alba variety of this species Generally three elegant white flowers with purple lip to the spike. Delicate veining in the throat. 5" pot\$25.00
- C. trianae II—Winter flowering, generally with light s & p and a darker lip. All plants flowering size. Priced according to strength of plant.
\$8.50-\$10.00 per lead
- C. trianae III—Better types than the above, larger flowers better confirmation. Some dark flowers, some light. Priced according to strength and quality.
\$10.00-\$12.50 per lead
- C. trianae IV—Still finer varieties chosen for especially fine color, shape or texture. Per lead\$25.00
- Bc Daffodil x C. trianae—Easily grown cross between the pure yellow Daffodil and a light trianae. Flowers with light pink s & p and yellow in the throat. Some plants have a suffusion of yellow showing through the pink. Floriferous \$8.50-\$10.00 per lead
- C. Guatemalensis—Lavendar color cluster, flowers suffused with orange 2 1/2"-3" in diameter. Have the fragrance of wild violets. Blooming season Feb. to May. Strong and floriferous.
4" and 5" pots\$10.00-\$15.00
- Lc Isabel Sander Rubra—(Lc Cannamiana x C Mossiae) Nice large lav. flower with large round purple lip. Blooms in May\$35.00
